

DK1 for education & training

Are physical training materials bogging you down? Is virtual learning not engaging your students? 9D interaction could be a solution for you!

Digital platforms can rapidly disseminate affordable learning materials to wide audiences. Both Virtual and Augmented Reality have been demonstrated as powerful platforms to support learning & training in a range of spaces. Our 9D stylus are the key step to making VR and AR education truly interactive and engaging.

By supporting 9D technology, educators could create uniquely interactive scenarios, and let their learners get hands on with virtual teaching materials. Senmag aspire to partner with developers of VR education and training applications to build a vast library of accessible interactive learning materials.

- Medical / dental training
- Manufacturing / fabrication training
- Technology classes
- Electronics and programming classes
- Physics, Chemistry and Biology classes

And many more...

Please get in touch with us to discuss your application or arrange a demonstration!
