

DK1 for entertainment & social

“Touch is the first language we speak” – 9D interaction is set to redefine how people interact with computerised entertainment or social systems.

Virtual and Augmented reality are gaining huge traction in the entertainment and social spaces, where these new platforms can offer a unique level of immersion within a virtual world, and the other people or characters within it.

However, the immersive illusion can be fast-broken by the lack of realistic haptic feedback. Our 9D stylus builds on the immersive effect of VR platforms, by allowing them to incorporate the sense of touch:

- Remote collaboration platforms,
- Video conferencing,
- Online multi-user games,
- Social media platforms,
- RTS or Sandbox games,

And many more...

Please get in touch with us to discuss your application or arrange a demonstration!
